19.31.11.13 PROCEDURES FOR CONDUCTING COUGAR DEPREDATION CONTROL IN OCCUPIED BIGHORN SHEEP RANGES:

A. The department shall investigate all bighorn sheep deaths to determine if cougar depredation has occurred. To determine cougar depredation, a field examination and a standardized necropsy of the dead bighorn sheep shall be completed by a department employee or contractor.

B. Should it be determined that a depredation has occurred, the following procedures will be used.

(1) The department will make an evaluation of the following: viability of the statewide bighorn population, review of long-term and recent data on the local population (or meta-population), review of data on recent predation, alternative management options such as habitat manipulation or transplants, feasibility of taking the offending animal(s), effects on the predator population, and feasibility of having a positive effect on the local bighorn population.

(2) The wildlife management division and the appropriate area operations office will be contacted.

(3) A permit for the taking of each depredating cougar(s) will be issued to the local district wildlife officer. Physical possession of the permit is not required to initiate action.

(4) A decision to hound hunt or snare will be based on evidence at the kill site.

(5) If the bighorn sheep kill is fresh enough that the cougar may return or is likely to still be in the immediate area, the department will attempt to get a hound-hunter or trapper to begin hunting the cougar(s) the same day the bighorn carcass is discovered.

(6) The size of the hunted area will be determined from the sex and, in some cases, number of cougars (i.e. female with kittens) involved in the bighorn kill.

(7) Where possible, cougar feces shall be taken at the scene of the depredation and tissue samples from the cougar killed by the hunter(s) will be collected. Deoxyribonucleic acid (DNA) testing will be performed to determine if the scat and tissue samples are from the same cougar.

[19.31.11.13 NMAC - Rp, 19.31.11.15 NMAC, 4-1-16]

- A.** The New Mexico department of game and fish may conduct preventive cougar control within bighorn sheep ranges.
- B.** The total number of cougars removed per license year from any zone containing bighorn ranges will not exceed the sustainable mortality limit for that zone unless approved pursuant to 19.31.11.8 NMAC.
- C.** The department will obtain the services of houndsmen or trappers either from the department's depredation list or through private contract.
- D.** A decision to hunt with hounds or to use snares will be made by the department.
- E.** All cougars taken for preventive control will be reported to the department.
